Q/A from WSJ below

1) Is there room for responsible mineral development near known Paleontological sites? If so, what sort of measures would be taken to protect the fossils and access for scientists to study them?

(b) (5) - DPP

(b) (5) - DPP

2) The President's proclamation allows mineral leasing in the reopened parts of the Grand Staircase and Bears Ears monuments. But I understand there have been no applications for leasing permits since the BLM on Feb. 1 said it would begin accepting them. Local Utah lawmakers say that's because the coal market is already saturated there and exploration for other minerals still faces fierce opposition and a long permitting process. Did Interior expect low demand for this? Do you expect interest will pick up eventually?

(b) (5) - DPP

3) Would the construction of new roads to access mineral sites open up the dinosaur areas to vandalism and looting, as the paleontologists fear?

(b) (5) - DPP

(b) (5) - DPP

A large rectangular area of text is completely redacted with a solid black box.

4) By breaking up the old GSENM and Bears Ears into monument and non-monument areas, scientists say that has made the permitting system for Paleontological work much harder. ie, some scientists who had monument permits now have to apply for BLM permits because their research site now sits outside of the old monument. Do you agree this is a problem?

(b) (5) - DPP

A large rectangular area of text is completely redacted with a solid black box.

5) Finally, can I get a general comment on whether you agree the Paleontological remains in both Grand Staircase and Bears Ears are important and need to be protected?

(b) (5) - DPP

A large rectangular area of text is completely redacted with a solid black box.
